Crisis Stabilization 8.14

Introduction

The purpose of this Factbook is to provide detailed reference information regarding the population, services, and outcomes of the State of Hawai'i Department of Health's Child and Adolescent Mental Health Division (CAMHD). The information reported here is based on the population of youth and families that were registered with CAMHD for one or more days during the period from July 1, 2013 to June 30, 2014. Thus, these "factsheets" present a snapshot of the CAMHD system as it functioned during the fiscal year of 2014.

Definitions for Information Reported

Data Sources

Data for this report were gathered from a variety of sources. The primary source of information is the Child and Adolescent Mental Health Management Information System (CAMHMIS), which supports registration of youth with CAMHD, authorization of services, electronic billing for services, and child status monitoring functions. System information was collected from independent databases maintained by various offices within CAMHD. The CAMHD Administrative Services Office maintains the databases for manual billing information and contracts, and provides analysis and reporting based on the Department of Accounting and General Services (DAGS) Financial Accounting and Management Information System (FAMIS). The Clinical Services Office maintains a database of youth placed in out-of-home settings based on weekly provider census reports. The CAMHD Research and Evaluation Office (REO) was responsible for merging and validating information from these databases, and is responsible for any errors in data or analysis reported here.

Child and Adolescent Mental Health Management Information System (CAMHMIS) Fields. Information was gathered and entered into CAMHMIS through the standard operating procedures of the regional Family Guidance Centers. Generally, care coordinators are responsible for gathering data from families and professionals and for organizing the completion of child status measures on a quarterly basis. Detailed information about the structure of the CAMHMIS database is beyond the scope of the present report.

The section to follow introduces and defines the information presented in the Factbook:

Population Variables

Admissions were defined to include both initial registrations and repeated registrations. Initial registrations were counted when a new record is created for a youth previously unknown to CAMHD with a registration start date within the reporting period. Repeated registrations were identified whenever a previously known youth had at least one registration record during the reporting period indicating a change in registration status from a discharged status to a registered status.

Age in Years was defined as the difference between a youth's date of birth and the final day of each fiscal year (e.g., June 30, 2014).

Diagnostic Status was defined based on Diagnostic and Statistical Manual of Mental Disorders (DSM-IV; American Psychiatric Association, 1994) codes entered into CAMHMIS. Children and youth may receive up to three Axis I diagnoses and two Axis II diagnoses. Diagnostic information from the most recent assessment recorded in CAMHMIS provided the data for these indicators. The primary diagnosis indicators count only primary diagnoses, whereas the *any diagnosis* indicators count a diagnosis within each category regardless of whether it is primary, secondary, or tertiary. The multiple diagnosis indicators describe the number and proportion of youth with any secondary or tertiary diagnosis recorded. The arithmetic mean of diagnoses is also reported for all registered youth.

Discharges were recorded when a youth had at least one registration record during the reporting period indicating a change in registration status from registered status to discharged status.

Ethnicity information was collected using the categories of Alaska Native, American Indian, Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, Other Asian, Black or African-American, Guamanian or Chamorro, Micronesian, Native Hawaiian, Samoan, Other Pacific Islander, White or Caucasian, Portuguese, Cuban, Mexican, Puerto Rican, or Other Hispanic or Latino or of Spanish Origin, Other Race or Ethnicity not Listed, or Unknown. The race and national origin categories were collected through two

different questions. Consumers could select multiple responses so the number of endorsements reported is duplicated across categories. A multiethnic category is also calculated indicating whether more than one category was endorsed regardless of whether the multiple categories occurred within or across racial and national origin groups.

Family Court Liaison Branch (FCLB) was defined as registration of youth to the statewide Family Court Liaison Branch as of the final day of the reporting period without registration to a regional Family Guidance Center.

Family Guidance Branch (FGB) is a term used to refer to the regional Family Guidance Centers along with the Family Court Liaison Branch and the "Other" center designation for special populations (e.g., youth involved in specially funded projects or special divisional programs).

Family Guidance Center (FGC) was defined as the most recent regional center to which youth were registered as of the final day of the reporting period.

Gender was based on (a) client self-presentation, (b) caregiver presentation of child gender, or (c) staff observation of child gender, and was coded as either female or male.

National Origin was based on client reports in the categories of (a) Hispanic or Latino or of Spanish Origin, (b) Not Hispanic or Latino or of Spanish Origin, or (c) Unknown whether Hispanic or Latino or of Spanish Origin. Within the Hispanic or Latino or of Spanish Origin category, clients could select multiple choices from the options of Cuban, Mexican, Puerto Rican, or Other.

Race was based on client reports as either (a) American Indian or Alaska Native; (b) Asian, (c) Black or African-American, (d) Native Hawaiian or Other Pacific Islander, (e) White, (f) Other Race or Ethnicity not Listed, (g) Multiracial, or (h) Unknown. Consumers could also select multiple choices from the options of Alaska Native, American Indian, Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, Other Asian, Black or African-American, Guamanian or Chamorro, Micronesian, Native Hawaiian, Samoan, Other Pacific Islander, White or Caucasian, or Portuguese. The multiracial category was identified when respondents selected multiple choices that crossed racial categories (e.g., American Indian and Chinese) but not when multiple choices were selected within the same racial category (e.g., Chinese and Filipino was classified as single race Asian). If valid client reports are not available then care coordinators may identify youth race, ethnicity, and national origin based on their observations. This category is reported as "Based on Observation."

Service Variables

Crisis Stabilization was defined to include community-based crisis group home and crisis therapeutic foster home.

Intensive Home and Community Services were defined to include partial hospitalization, Multisystemic Therapy, and intensive in-home services.

Monthly Treatment and Progress Summary (MTPS). The MTPS (CAMHD 2003; 2005) is a locally constructed clinician report form designed to measure the service format, service setting, treatment targets, clinical progress, intervention practice elements, and provider outcomes on a monthly basis. In addition to providing structured response options from which clinicians could select, the MTPS included other fields for each domain that allowed clinicians to write open-ended responses that were not addressed by the predefined fields. For the format and setting questions, clinicians are asked to indicate all formats (individual, group, parent, family, teacher, or other) and settings (home, school, community, out of home, clinic/office, or other) in which the youth received services during the reporting month. Clinicians are then asked to indicate up to 10 target competencies or concerns, which were the focus of treatment during the reporting month. The targets are selected from a list of 48 predefined targets and two additional open-response fields are provided. Clinicians then provide a progress rating for each target that describes the degree of progress achieved between the child's baseline level of functioning and the goal specified for the target. Progress ratings are provided on a 7-point scale with the anchors of *Deterioration (< 0%), No Significant changes (0 – 10%), Minimal Improvement (11 – 30%), Some Improvement (31 – 50%), Moderate Improvement (51 – 70%), Significant Improvement (71 – 90%),* and *Complete Improvement (91 – 100%)*. Next, clinicians are asked to indicate all of the specific intervention strategies (i.e., practice

elements) that were used with the child and family during the month. The MTPS records 63 predefined intervention practice elements (e.g., activity scheduling, assertiveness training, biofeedback, etc.) and allows for the write-in of up to three additional intervention practice elements per month. The 2005 revision includes additional fields for listing psychiatric medications, dose, and schedule, discharge living situation, and reason for discharge. Finally, the MTPS provides a number of optional fields that allow providers to report other measure of outcomes that they may collect including the CAFAS and CALOCUS, whether the youth was arrested during the month, and the percent of school days attended. These forms and the structured codebook defining the interventions are available on the CAMHD website. Statewide training is provided on the completion of the form and definitions of various practice elements.

For the Factbook, MTPS data were based exclusively on CAMHMIS records. Providers' written responses were individually reviewed and coded into appropriate categories, including new response categories that were created to account for responses that could not be categorized into the existing category framework. The definitions for the specific codes are as follows:

Service Setting

Home – Working with youth or family members in the youth's home.
School – Working with youth or professionals in the youth's educational setting, other than in the context of an IEP/MP meeting.
Community – Working with youth or others in the youth's community/neighborhood.
Out of Home – Working with the youth or family in a residential facility.
Clinic/Office – Working with the youth or family in a clinical office.
Phone – Any written response to an open-ended question that indicated use of the telephone as a service setting. No specification of the person called was required.
Other – Any written response to an open-ended question that could not be categorized into another service setting sub-category and did not necessitate the addition of a new category.

Service Format

Individual – Working with youth directly.
Group – Working with youth along with other youths receiving services.
Parent – Working directly with parents or caretakers, with youth not present.
Family – Working with parents or caretakers and youth together. Can include other family members.
Teacher – Working with a teacher directly.
Phone – Any written response to an open-ended question that indicated use of the telephone as a service format. No specification of the person called was required.
Professional Consult – Any written response to an open-ended question that indicated consultation or involvement of another service profession.
Other – Any written response to an open-ended question that could not be categorized into another service format sub-category and did not necessitate the addition of a new category.

Discharge Living Situation - Describes the type of living environment in which the youth was expected to reside at the time of discharge.

Foster Home – A home that is licensed to provide foster care to children, adolescents, and/or adults. Examples include foster homes or therapeutic foster homes.
Group Care – This level of care may include group homes, therapeutic group homes, or board and care homes. This excludes community-based residential and hospital-based residential care where youth reside in a group care facility.
Home – This living situation for youth includes places where youth live in houses, apartments, trailers, hotels, dorms, barracks, and/or single rooms. This excludes situations better characterized as foster homes.
Homeless/Shelter – Youth are considered homeless if they lack a fixed, regular, and adequate nighttime residence or their primary nighttime residency is a supervised publicly or privately operated shelter designed to provide temporary living accommodations, an institution that provides a temporary residence for individuals intended to be institutionalized, or a public or private place not designed for, or ordinarily used as a regular sleeping accommodation for human beings (e.g., on the street). Youth who were discharged due to extended runaway or elopement episode should be recorded in this category.

Institutional/Hospital – This level of care includes skilled nursing/intermediate care facilities, nursing homes, institutes of mental disease, inpatient psychiatric hospitals, psychiatric health facilities, Veterans Affairs hospitals, or state hospitals where youth reside with care provided on a 24 hour, 7 day per week basis.

Jail/Correctional Facility – This level of care includes jails, correctional facilities, detention centers, prisons, youth authority facilities, juvenile halls, boot camps, or boys ranches where youth reside with care provided on a 24 hour, 7 day per week basis.

Residential Treatment – This level of care includes community-based residential treatment centers, rehabilitation centers, or other residential treatment that are not better characterized as group homes or institution/hospital facilities. An organization, not licensed as a psychiatric hospital, whose primary purpose is the provision of individually planned programs of mental health treatment services in conjunction with residential care for children and youth. The services are provided in facilities that are certified by state or federal agencies or through a national accrediting agency.

Other – Any other Discharge Living Situation response that could not be categorized in one of the above sub-categories.

Reason for Discharge

Eligibility Change – Youth discharged in association with a change in eligibility for services, such as a termination of a court order or commitment, aging out of child and adolescent services, loss of Medicaid insurance, etc.

Family Relocation – Youth discharged because the youth and family moved out of state or out of the service area.

Insufficient Progress – Youth discharged from service without showing sufficient treatment progress to be judged as clinically successful (i.e., little symptom reduction, improvement in functioning, or goal attainment was achieved).

Runaway/Elopement – Youth discharged in association with an extended period of unavailability for treatment because the youth had run away from home or eloped from the program.

Refuse/Withdraw – Youth discharged due to parental refusal, non-participation in treatment, lack of consent, or other indication that client withdrew from services against professional advice.

Success/Goals Met – Youth clinically discharged due to sufficient treatment progress (e.g., symptoms reduced, functioning improved), treatment goals were met, youth was evaluated and services were determined unnecessary, services were completed, or youth was moving to a less restrictive and intensive level of care.

Other – Any other Reason for Discharge response that could not be categorized in one of the above sub-categories.

Treatment Target - described the strengths and needs being addressed as part of the youths' mental health services.

Academic Achievement – issues related to general level or quality of achievement in an educational or academic context. This commonly includes performance in coursework, and excludes cognitive-intellectual ability/capacity issues and specific challenges in learning or achievement.

Activity Involvement – issues related to general engagement and participation in activities. Only code here those activities that are not better described by the particular activity classes of school involvement, peer involvement, or community involvement.

Adaptive Behavior/Living Skills – any written response to an open-ended question that targeted development of skills related to independent living, social functioning, financial management, and self-sufficiency that are not better captured under other codes such as personal hygiene, self-management, social skills, housing/living situation, or occupational functioning/stress.

Adjustment to Change – any written response to an open-ended question referring to targeting a youth's global response to a life transition or specific challenge (e.g., change of school, living situation, treatment transition or discharge, etc.).

Adult Inter-coordination – any written response to an open-ended question that targeted communication and interaction among relevant adults and/or service system workers involved in a child's life. This includes such things as home-school relationships, communication between service providers, treatment team members, transition and discharge preparedness, guardianship issues, etc.

Aggression – verbal and/or physical aggression, or threat thereof, that results in intimidation, physical harm, or property destruction.

Anger – emotional experience or expression of agitation or destructiveness directed at a particular object or individual. Common physical feelings include accelerated heartbeat, muscle tension, quicker breathing, and feeling hot.

Anxiety – a general uneasiness that can be characterized by irrational fears, panic, tension, physical symptoms, excessive anxiety, worry, or fear.

Assertiveness – the skills or effectiveness of clearly communicating one's wishes. For example, the effectiveness with which a child refuses unreasonable requests from others, expresses his/her rights in a non-aggressive manner, and/or negotiates to get what s/he wants in their relationships with others.

Attention Problems – described by short attention span, difficulty sustaining attention on a consistent basis, and susceptibility to distraction by extraneous stimuli.

Avoidance – behaviors aimed at escaping or preventing exposure to a particular situation or stimulus.

Caregiver Self-Management/Coping – any written response to an open-ended question that indicated attempting to alter a caregiver's management, regulation, or monitoring of their own behavior and emotions.

Cognitive-Intellectual Functioning – issues related to cognitive-intellectual ability/capacity and use of those abilities for positive adaptation to the environment. This includes efforts to increase IQ, memory capacity, or abstract problem-solving ability.

Community Involvement – detailed description of amount of involvement in specific community activities within the child's day.

Compulsive Behavior – any written response to an open-ended question that targeted specific compulsive/excessive responses such as hoarding or trichotillomania.

Contentment/Enjoyment/Happiness – refers to issues involving the experience and expression of satisfaction, joy, pleasure, and optimism for the future.

Depressed Mood – behaviors that can be described as persistent sadness, anxiety, or "empty" mood, feelings of hopelessness, guilt, worthlessness, helplessness, decreased energy, fatigue, etc.

Eating/Feeding Problems – knowledge or behaviors involved with the ingestion or consumption of food. May include nutritional awareness, food choice, feeding mechanics (e.g., swallowing, gagging, etc.), and social factors relating to eating situations.

Empathy – identifications with and understanding of another person's situation, feelings, and motives.

Enuresis/Encopresis – enuresis refers to the repeated pattern of voluntarily or involuntarily passing urine into inappropriate places during the day or at night in bed or clothes. Encopresis refers to a repeated pattern of voluntarily or involuntarily passing feces into inappropriate places.

Fire Setting – intentionally igniting fires.

Fitness/Exercise – any written response to an open-ended question that indicated issues related to general fitness or exercise.

Gender Identity Problems – issues related to a youth's self-concept or self-understanding involving sex roles and social behaviors in relation to their biological sex. This does not address self-concept issues involving sexual orientation, which would be coded as "other."

Goal Setting – any written response to an open-ended question that indicated targeting the clarification and commitment to future goals (e.g., academic, career, etc.) that are not better characterized under other targets such as self-management or occupational functioning/stress.

Grief – feelings associated with a loss of contact with a significant person in the youth's environment (e.g., parent, guardian, friend, etc.).

Health management – issues related to the improvement or management of one's health, inclusive of both physical illness and fitness. In addition to dealing with the general development of health oriented behavior and management of health conditions, this target can also focus on exercise or lack of exercise.

Housing/Living Situation – any written response to an open-ended question that indicated finding or stabilizing an appropriate living situation for a youth.

Hyperactivity – can be described by fidgeting, squirming in seat, inability to remain seated, talking excessively, difficulty engaging in leisure activities quietly, etc.

Information Gathering – any written response to an open-ended question that indicated focus on service provider learning more about the child and family through assessment, evaluation, or history taking.

Learning Disorder, Underachievement – refers to specific challenges with learning or educational performance that are not better accounted for by cognitive-intellectual functioning or general academic achievement.

Low Self-Esteem – an inability to identify or accept his/her positive traits or talents, and accept compliments. Verbalization of self-disparaging remarks and viewing him or herself in a negative manner.

Mania – an inflated self-perception that can be manifested by loud, overly friendly social style that oversteps social boundaries and high energy and restlessness with a reduced need for sleep.

Medical Regimen Adherence – knowledge, attitudes, and behaviors related to regular implementation procedures prescribed by a health care professional. Commonly include lifestyle behaviors (e.g., exercise, nutrition), taking medication, or self-administration of routine assessments (e.g., taking blood samples in a diabetic regimen).

Occupational Functioning/Stress – any written response to an open-ended question that indicated issues related to career interests, seeking employment, obtaining work permits, job performance, or managing job stress or strain that are not better characterized under other targets (e.g., anxiety).

Oppositional/Non-Compliant Behavior – behaviors that can be described as refusal to follow adult requests or demands or established rules and procedures (e.g., classroom rules, school rules, etc.).

Pain Management – any written response to an open-ended question that indicated a focus on regulating experiences or behaviors related to pain or ill health.

Parenting Skills – any written response to an open-ended question that indicated attempting to modify a caregiver's strategies for managing child behavior, emotions, or structuring of the caregiving environment.

Peer Involvement – a greater involvement in activities with peers. Activities could range from academic tasks to recreational activities while involvement could range from working next to a peer to initiating an activity with a peer.

Peer/Sibling Conflict – peer and/or sibling relationships that are characterized by fighting, bullying, defiance, revenge, taunting, incessant teasing and other inappropriate behaviors.

Phobia/Fears – irrational dread, fear, and avoidance of an object, situation, or activity.

Personal Hygiene – challenges related to self-care and grooming.

Positive Family Functioning – issues related to healthy communication, problem-solving, shared pleasurable activities, physical and emotional support, etc. in the context of interactions among multiple persons in a family relation, broadly defined.

Positive Peer Interaction – social interaction and communication with peers that are pro-social and appropriate. This differs from peer involvement in that it focuses on interactional behavior, styles, and intentions, whereas peer involvement targets actual engagement in activities with peers regardless of interactional processes.

Positive Thinking/Attitude – this target involves clear, healthy, or optimistic thinking, and involves the absence of distortions or cognitive bias that might lead to maladaptive behavior.

Pregnancy Education/Adjustment – any written response to an open-ended question that indicated issues related to helping a pregnant youth prepare and adjust to parenthood.

Psychosis – issues related to bizarre thought content (e.g., delusions of grandeur, persecution, reference, influence, control, somatic sensations), and/or auditory or visual hallucinations.

Runaway – running away from home or current residential placement for a day or more.

Safe Environment – any written response to an open-ended question that indicated establishing a safe and secure environment for the youth's development that was not better described as targeting the youth's housing/living situation.

School Refusal/Truancy – reluctance or refusal to attend school without adult permission for the absence. May be associated with school phobia or fear manifested by frequent somatic complaints associated with attending school or in anticipation of school attendance, or willful avoidance of school in the interest of pursuing other activities.

School Involvement – detailed description of amount of involvement in specific school activities within the child's scheduled school day.

Self-Injurious Behavior – acts of harm, violence, or aggression directed at oneself.

Self-Management/Self-Control – issues related to management, regulation, and monitoring of one's own behavior.

Sexual Misconduct – issues related to sexual conduct that are defined as inappropriate by the youth's social environment or that include intrusion upon or violation of the rights of others.

Sexual Orientation – any written response to an open-ended question that indicated issues related to clarification or management of a youth's sexual orientation that are excluded from the gender identity problems code.

Shyness – social isolation and/or excessive involvement in isolated activities. Extremely limited or no close friendships outside the immediate family members. Excessive shrinking or avoidance of contact with unfamiliar people.

Sleep Disturbance – difficulty getting to or maintaining sleep.

Social Skills – skills for managing interpersonal interactions successfully. Can include body language, verbal tone, assertiveness, and listening skills, among other areas.

Speech and Language Problems – expressive and/or receptive language abilities substantially below expected levels as measured by standardized tests.

Substance Abuse/Substance Use – issues related to the use or misuse of a common, prescribed, or illicit substances for altering mental or emotional experience or functioning.

Suicidality – issues related to recurrent thoughts, gestures, or attempts to end one's life.

Traumatic Stress – issues related to the experience or witnessing of life events involving actual or threatened death or serious injury to which the youth responded with intense fear, helplessness, or horror.

Treatment Engagement – any written response to an open-ended question that indicated targeting interest, motivation, or active participation in therapeutic activities. This included targeting improved rapport.

Treatment Planning/Framing – any written response to an open-ended question that indicated setting or revising a treatment plan or treatment structure (including IEPs, CSPs, MPs, MHTPs, etc.).

Willful Misconduct/Delinquency – persistent failure to comply with rules or expectations in the home, school, or community. Excessive fighting, intimidation of others, cruelty or violence toward people or animals, and/or destruction of property.

Other – any written response to an open-ended question that could not be categorized into another treatment target sub-category and did not necessitate the addition of a new category.

Unclear – any written response to an open-ended question whose meaning could not be discerned and could not be coded into another category (e.g., relationship issues not otherwise specified).

<u>Practice Elements</u> (a.k.a. Intervention Strategies; Treatment Practices)

Activity Scheduling – the assignment or request that a child participate in specific activities outside of therapy time, with the goal of promoting or maintaining involvement in satisfying and enriching experiences.

Anger Management – any written response to an open-ended question that referred to treatment in the family of anger management with no specific practices identified.

Animal or Plant Assisted Activities – any written response to an open-ended question that indicated use of activities incorporating animals or plants as a therapeutic modality.

Arousal Reconditioning – any written response to an open-ended question that indicated use of classical or operant conditioning procedures to alter the targets of sexual arousal.

Art/Music Therapy – any written response to an open-ended question that indicated use of expressive activities as a therapeutic modality.

Assertiveness Training – exercises or techniques designed to promote the child's ability to be assertive with others, usually involving rehearsal of assertive interactions.

Assessment – any written response to an open-ended question that focused on service provider learning more about the child and family through evaluation, testing, or observation (that would not qualify as parent or self-monitoring).

Attending – exercises involving the youth and caregiver playing together in a specific manner to facilitate their improved verbal communication and nonverbal interaction. This can involve the caregiver's imitation and participation in the youth's activity, as well as parent-directed play (previously called "Directed Play").

Behavioral Contracting – any written response to an open-ended question that indicated the development of a formal agreement specify rules, consequences, and a commitment by the youth and relevant others to honor the content of the agreement.

Behavior Management – any written response to an open-ended question that indicated the use of behavioral techniques or plan with no specific practices identified.

Biofeedback/ Neurofeedback – strategies to provide information about physiological activity that is typically below the threshold of perception, often involving the use of specialized equipment.

Care Coordination – any written response to an open-ended question that indicated coordinating among the service providers to ensure effective communication, receipt of appropriate services, adequate housing, etc.

Catharsis – strategies designed to bring about the release of intense emotions, with the intent to develop mastery of affect and conflict.

Cognitive/Coping – any techniques designed to alter interpretation of events through examination of the child's reported thoughts, typically through the generation and rehearsal of alternative counter-statements. This can sometimes be accompanied by exercises designed to comparatively test the validity of the original thoughts and the alternative thoughts through the gathering or review of relevant information.

Commands/Limit Setting – training for caretakers in how to give directions and commands in such a manner as to increase the likelihood of child compliance.

Communication Skills – training for youth or caretakers in how to communicate more effectively with others to increase consistency and minimize stress. Can include a variety of specific communication strategies (e.g., active listening, "I" statements).

Counseling – any written response to an open-ended question that referred to counseling sessions with youth or parent with no specific practices identified.

Crisis Management – immediate problem solving approaches to handle urgent or dangerous events. This might involve defusing an escalating pattern of behavior and emotions either in person or by telephone, and is typically accompanied by debriefing and follow-up planning.

Cultural Training – any written response to an open-ended question that indicated education or interaction with culturally important values, rituals, or sites with no specific practices identified.

Discrete Trial Training – a method of teaching involving breaking a task into many small steps and rehearsing these steps repeatedly with prompts and a high rate of reinforcement.

Educational Support – exercises designed to assist the child with specific academic problems, such as homework or study skills. This includes tutoring.

Emotional Processing – a program based on an information processing model of emotion that requires activation of emotional memories in conjunction with new and incompatible information about those memories.

Exposure – techniques or exercises that involve direct or imagined experience with a target stimulus, whether performed gradually or suddenly, and with or without the therapist's elaboration or intensification of the meaning of the stimulus.

Eye Movement/Body Tapping – a method in which the youth is guided through a procedure to access and resolve troubling experiences and emotions, while being exposed to a therapeutic visual or tactile stimulus designed to facilitate bilateral brain activity.

Family Engagement – the use of skills and strategies to facilitate family or child's positive interest in participation in an intervention.

Family Therapy – a set of approaches designed to shift patterns of relationships and interactions within a family, typically involving interaction and exercises with the youth, the caretakers, and sometimes siblings.

Family Visit – any written response to an open-ended question that indicated structured or unstructured therapeutic visits with one or more family members who is not typically part of the youth's daily ecology during the course of treatment.

Free Association – technique for probing the unconscious in which a person recites a running commentary of thoughts and feelings as they occur.

Functional Analysis – arrangement of antecedents and consequences based on a functional understanding of a youth's behavior. This goes beyond straightforward application of other behavioral techniques.

Goal Setting – any written response to an open-ended question that indicated setting specific goals and developing commitment from youth or family to attempt to achieve those goals (e.g., academic, career, etc.).

Guided Imagery – visualization or guided imaginal techniques for the purpose of mental rehearsal of successful performance. Guided imagery for the purpose of physical relaxation (e.g., picturing calm scenery) is not coded here, but rather coded under relaxation.

Ho'Oponopono – any written response to an open-ended question that indicated use of the techniques of Ho'Oponopono with no specific practices identified.

Hypnosis – the induction of a trance-like mental state achieved through suggestion.

Ignoring or Differential Reinforcement of Other Behavior – the training of parents or others involved in the social ecology of the child to selectively ignore mild target behaviors and selectively attend to alternative behaviors.

Individual Therapy for Caregiver – any therapy designed directly to target individual (non-dyadic) psychopathology in one or more of the youth's caregivers. This is distinct from Marital Therapy and Communication Skills.

Informal Supports – any written response to an open-ended question that explicitly identified working with youth or families to make use of informal supports in their homes and communities (e.g., cultural or faith based groups, neighbors and friends, etc.).

Insight Building – activity designed to help a youth achieve greater self-understanding.

Interpretation – reflective discussion or listening exercises with the child designed to yield therapeutic interpretations. This does not involve targeting specific thoughts and their alternatives, which would be coded as cognitive/coping.

Juvenile Sex Offender Treatment – any written response to an open-ended question that indicated sex offender treatment with no specific practices identified.

Legal Assistance/Involvement – any written response to an open-ended question that indicated obtaining legal aide for the youth or family or engaging the legal system to provide additional motivation for treatment.

Line of Sight Supervision – direct observation of a youth for the purpose of assuring safe and appropriate behavior.

Maintenance/Relapse Prevention – exercises and training designed to consolidate skills already developed and to anticipate future challenges, with the overall goal to minimize the chance that gains will be lost in the future.

Marital Therapy – techniques used to improve the quality of the relationship between caregivers.

Medication/ Pharmacotherapy – any use of psychotropic medication to manage emotional, behavioral, or psychiatric symptoms.

Mentoring – pairing with a more senior and experienced individual who serves as a positive role model for the identified youth.

Milieu Therapy – a therapeutic approach in residential settings that involves making the environment itself part of the therapeutic program. Often involves a system of privileges and restrictions such as a token or point system.

Mindfulness – exercises designed to facilitate present-focused, non-evaluative observation of experiences as they occur, with a strong emphasis of being "in the moment." This can involve the youth's conscious observation of feelings, thoughts, or situations.

Modeling – demonstration of a desired behavior by a therapist, confederates, peers, or other actors to promote the imitation and subsequent performance of that behavior by the identified youth.

Motivational Interviewing – exercises designed to increase readiness to participate in additional therapeutic activity or programs. These can involve cost-benefit analysis, persuasion, or a variety of other approaches.

Natural and Logical Consequences – training for parents or teachers in (a) allowing youth to experience the negative consequences of poor decisions or unwanted behaviors, or (b) delivering consequences in a manner that is appropriate for the behavior performed by the youth.

Parent Coping – exercises or strategies designed to enhance caretakers' ability to deal with stressful situations, inclusive of formal interventions targeting one or more caretaker.

Parent Monitoring – the repeated measurement of some target index by the caretaker.

Parent Praise – the training of parents or others involved in the social ecology of the child in the administration of social rewards to promote desired behaviors. This can involve praise, encouragement, affection, or physical proximity.

Parenting – any written response to an open-end question that addressed parenting issues with caregiver(s) but no specific practices identified.

Peer Modeling/Pairing – pairing with another youth of same or similar age to allow for reciprocal learning or skills practice.

Personal Safety Skills – training for the youth in how to maintain personal safety of one's physical self. This can include education about attending to one's sense of danger, body ownership issues (e.g., "good touch-bad touch"), risks involved with keeping secrets, how to ask for help when feeling unsafe, and identification of other high-risk situations for abuse.

Physical Exercise – the engagement of the youth in energetic physical movements to promote strength or endurance or both. Examples can include running, swimming, weight-lifting, karate, soccer, etc. Note that when the focus of the physical exercise is also to produce talents or competence, Skill Building may also apply.

Play Therapy – the use of play as a primary strategy in therapeutic activities. This may include the use of play as a strategy for clinical interpretation. Different from Directed Play, which involves a specific focus on modifying parent-child communication. This is also different from play designed specifically to build relationship quality.

Problem Solving – techniques, discussions, or activities designed to bring about solutions to targeted problems, usually with the intention of imparting a skill for how to approach and solve future problems in a similar manner.

Psychoeducational-Child – the formal review of information with the child about the development of a problem and its relation to a proposed intervention.

Psychoeducational-Parent – the formal review of information with the caretaker(s) about the development of the child's problem and its relation to a proposed intervention. This often involves an emphasis on the caretaker's role in either or both.

Relationship/Rapport Building – strategies in which the immediate aim is to increase the quality of the relationship between the youth and the therapist. Can include play, talking, games, or other activities.

Relaxation – techniques or exercises designed to induce physiological calming, including muscle relaxation, breathing exercises, meditation, and similar activities. Guided imagery exclusively for the purpose of physical relaxation is also coded here.

Response Cost – training parents or teachers how to use a point or token system in which negative behaviors result in the loss of points or tokens for the youth.

Response Prevention – explicit prevention of a maladaptive behavior that typically occurs habitually or in response to emotional or physical discomfort.

Self-Monitoring – the repeated measurement of some target index by the child.

Self-Reward/Self-Praise – techniques designed to encourage the youth to self-administer positive consequences contingent on performance of target behaviors.

Skill Building – the practice or assignment to practice or participate in activities with the intention of building and promoting talents and competencies.

Social Skills Training – providing information and feedback to improve interpersonal verbal and non-verbal functioning, which may include direct rehearsal of the skills. If this is paired with peer pairing, that should be coded as well.

Stimulus/Antecedent Control – strategies to identify specific triggers for problem behaviors and to alter or eliminate those triggers in order to reduce or eliminate the behavior.

Supportive Listening – reflective discussion with the child designed to demonstrate warmth, empathy, and positive regard, without suggesting solutions or alternative interpretations.

Tangible Rewards – the training of parents or others involved in the social ecology of the child in the administration of tangible rewards to promote desired behaviors. This can involve tokens, charts, or record keeping, in addition to first-order reinforcers.

Therapist Praise/Rewards – the administration of tangible (i.e. rewards) or social (e.g., praise) reinforcers by the therapist.

Thought Field Therapy – techniques involving the tapping of various parts of the body in particular sequences or "algorithms" in order to correct unbalanced energies, known as thought fields.

Time Out – the training of or the direct use of a technique involving removing the youth from all reinforcement for a specified period of time following the performance of an identified, unwanted behavior.

Twelve-step Programming – any programs that involve the twelve-step model for gaining control over problem behavior, most typically in the context of alcohol and substance use, but can be used to target other behaviors as well.

Other – any written response to an open-ended question that could not be categorized into another intervention strategy sub-category and did not necessitate the addition of a new category.

Unclear – any written response to an open-ended question whose meaning could not be discerned and could not be coded into another category.

Out-of-Home Services was an indicator variable identifying if a youth received any out-of-home service during the period. Out-of-home services included out-of-state, hospital residential, community high-risk residential, community residential, Multidimensional Treatment Foster Care, and transitional family home. Billing records for bed-holds and therapeutic passes were also considered when calculating the indicator of whether a youth received any out-of-home services. When specifically noted, some analysis may include services provided while youth were detained or incarcerated as out-of-home services.

Outpatient Services were defined to include treatment (i.e., medication management, Functional Family Therapy, and outpatient therapy [individual, group, or family]), consultation, and assessment of any type.

Services Procured (Receipt of Services) was calculated based on records that were accepted as payable during billing adjudication. This billing information is augmented by information from manual billing and weekly provider census data from the Fiscal and Clinical Services Offices for specific levels of care. A youth is identified as receiving a service if there was any indication of service for that youth on at least one day during the reporting period. Thus, the service receipt counts are unduplicated within a level of care, but are duplicated across levels of care. For example a youth who received hospital residential and intensive in-home services would be recorded as receiving both of these levels during the period. A hierarchical model of services is used so that unduplicated aggregates are systematically presented. For example, the out-of-home services count is unduplicated across out-of-home services, such that a youth who received hospital

residential and community residential services would be counted only once for the out-of-home services, but would also be counted at the hospital residential and community residential levels.

Service Changes: Care Coordinator Changes were defined as any change in the assignment of a care coordinator to a youth as recorded in CAMHMIS child registration. The total number of changes across all youth is reported, as are the average number of changes per month, and the average number of changes per registered youth during the reporting period (i.e., FY 2014).

Service Changes: Out-of-Home Changes were defined as any transition of services from one type of out-of-home service to another (e.g., hospital-residential to therapeutic group home).

Service Changes: Placement Changes were defined as any transition of services from community-based to out-of-home or from one type of out-of-home service to another (e.g., hospital-residential to therapeutic group home).

Service Changes: Provider Agency Changes were calculated as the number of provider agency changes per period. For example, a youth who moved from a community residential provider to a Multisystemic Therapy provider during a period would record one provider change, whereas a youth moving from community residential to hospital residential and back to community residential services during the period would record two changes. A youth changing providers within a level of care would record a provider change whereas a youth changing levels of care within a provider agency may not. This variable was selected to provide a gross indicator of the frequency with which youth experience major service transition, but it does not capture the frequency of changes to individual therapists within a provider agency.

Service Intensity was defined as the number of service hours per reporting period. Service units are generally recorded in CAMHMIS as 15-minute units for non-residential services and daily units for out-of-home services. To create a relatively comparable metric across levels of care, daily out-of-home services were converted to hours at a rate of 6.5 hours per day. The service intensity was designed to provide some basis for comparison across time, but the absolute level of this indicator is largely meaningless due to the arbitrary nature of the daily conversion rate.

Supportive Services was defined to include respite home and ancillary services that could not be classified as another level of care.

Outcome Variables

Child and Adolescent Functional Assessment Scale (CAFAS). The CAFAS (Hodges, 1998) is a 200-item clinician report scale that measures youth's level of functional impairment. Based on their knowledge and experience with the child, raters review behavioral descriptions ordered by level of impairment within eight domains of functioning. The subscales of School Role Performance, Home Role Performance, Community Role Performance, Behavior Toward Others, Mood/Emotions, Mood/Self-Harmful Behavior, Substance Use, and Thinking are calculated by scoring the highest level of impairment (i.e., severe = 30, moderate = 20, mild = 10, no/minimal = 0) endorsed within the respective domain of items. An eight-scale total score is calculated by summing across the eight subscales, whereas a five-scale total is calculated by summing the raw scores from behavior, substance use, and thinking scales with the maximum score from the school, home, and community role performance scales and with the maximum score from the emotions and self-harm. The CAFAS has been found to have acceptable internal consistency across items, inter-rater reliability across sites, and stability across time (Hodges, 1995; Hodges and Wong, 1996). Studies of concurrent validity have found that CAFAS scores are related to severity of psychiatric diagnosis, intensity of care provided, restrictiveness of living settings, juvenile justice involvement, social relationship difficulties, school-related problems, and risk factors. Studies of predictive validity have found that CAFAS scores from intake assessments predict service utilization and cost for services. Analysis of the operating characteristics of the CAFAS within the CAMHD system suggested reasonable convergent validity with the CALOCUS and MTPS progress ratings periods (Daleiden, 2004; Nakamura, Daleiden, & Mueller, 2007). Care coordinators serve as the primary raters for the CAFAS and results are entered directly into a networked, computer-scoring program by care coordinators or statistics clerks.

Recommended interpretation guidelines for the eight-scale total score are**:**

8-Scale	Description
0 – 10	Exhibits no or minimal impairment
20 – 40	Likely can be treated on an outpatient basis provided that risk behaviors are not present
50 – 90	May need care additional services beyond outpatient care
100 –130	Likely needs care which is more intensive than outpatient and/or which includes multiple sources of supportive care
140 +	Likely needs intensive treatment, the form of which would be shaped by the presence of risk factors and the resources available within the family and the community

Child and Adolescent Level of Care Utilization System. The CALOCUS (American Academy of Child and Adolescent Psychiatry, 1999) is a clinician rating form. Clinicians make dimensional ratings on a five-point scale in the domains of risk of harm, functional status, comorbidity, environmental stress, environmental support, resiliency and treatment history, child treatment acceptance and engagement, and parent treatment acceptance and engagement. These ratings may be summed to yield a total score, but are also combined through a detailed algorithm into a level of care judgment into one of seven categories: basic services (Level 0), recovery maintenance and health management (Level 1), outpatient services (Level 2), intensive outpatient services (Level 3), intensive integrated service without 24-hour medical monitoring (Level 4), non-secure, 24-hour, medically monitored services (Level 5), and secure, 24-hour, medically managed services (Level 6). Preliminary reliability (Fallon et al., 2002) indicated that intrajudge agreement based on clinical vignettes ranged from ICC (2, 2) = .57 - .95 across scales with all scale above .70 except for environmental stress and child treatment acceptance and engagement. Preliminary validity analysis found that the CALOCUS total score correlated -.33 with the Child Global Assessment of Scale (CGAS) and .62 with the CAFAS eight-scale total score. Analysis of the operating characteristics of the CALOCUS within the CAMHD system suggested reasonable convergent validity with the CAFAS and MTPS progress ratings over short time periods (Daleiden, 2004; Nakamura, Daleiden, & Mueller, 2007). Care coordinators serve as the primary raters for the CALOCUS and results are entered directly into a networked, computer-scoring program by care coordinators or statistics clerks.

Recommended interpretation guidelines for the total and level of care scores are:

Total	Level	Description
7 – 9	0	Basic Services
10 – 13	1	Recovery Maintenance and Health Management
14 – 16	2	Outpatient Services
17 – 19	3	Intensive Outpatient Services
20 – 22	4	Intensive Integrated Service without 24-hour Psychiatric Monitoring
23 – 27	5	Non-secure, 24-hour, Services with Psychiatric Monitoring
28 +	6	Secure, 24-hour, Services with Psychiatric Monitoring

CAMHD Lifetime Max represents the most severe level of functioning, need, or impairment known to CAMHD since the youth has entered the system. Specifically, this is the highest score that the youth has ever received at any assessment occasion recorded in CAMHMIS. Due to missing data or time between assessments, this value may underestimate the youth's "true" level of most impaired functioning.

Average During Period represents the youth's typical level of functioning during the reporting period as defined by the arithmetic average of all scores recorded for the youth during the reporting period.

Most Recent Score represents the most "up-to-date" status of the youth as indicated by the most recent assessment conducted during the reporting period.

Average Change in Score represents the most "up-to-date" status of the youth relative to their most impaired status and is an indication of the amount of progress the youth has achieved since their "worst" level.

Specifically, the youth's most recent score is subtracted from their CAMHD lifetime maximum score to calculate this value. The number of youth (N) reported for this indicator includes youth with at least two assessments, one of which must have been completed during the reporting period.

Reliable Improvement in Child Status. Reliable improvements were calculated using the most recent score during the reporting period for youth with more than one assessment. This was compared to the most impaired level of functioning the child experienced during any assessment since s/he was registered for CAMHD services. This index describes whether the child's recent functioning is statistically significantly better than the most problematic functioning. This maximum to recent value comparison was selected to increase the sample size available for this analysis due to limited availability of intake assessments available. Because the maximum values represent extreme scores, this procedure will tend to overestimate the percent of improvement that would be expected from intake to most recent scores. However, the maximum scores also tended to have greater variability than intake scores, so the amount of change necessary to be considered reliable would also be greater and thus tend to buffer the overestimation effect. The final indicator was the number of youth showing reliable improvement divided by the number of youth (N) with maximum scores in the moderate to severe range represented as a percentage.

Clinical Improvement in Child Status. Youth were identified as experiencing clinical improvements if their maximum scores represented moderate to severe impairments or problems and their most recent score represented mild or borderline problems. The final indicator was the number of youth showing clinical improvement divided by the number of youth (N) with maximum scores in the moderate to severe range represented as a percentage. For the CAFAS, total scores of 70 or above were defined as moderate to severe, whereas scores 20 or above on the subscales were defined as moderate to severe. For the CALOCUS, a level of care score of 3 or above were defined as moderate to severe, whereas scores of 17 or above on the total scale define moderate to severe.
