INTRODUCTION

Who was surveyed?

The 2012 Hawaii Behavioral Risk Factor Surveillance survey consisted of landline and cell phone participants. Important changes to the calendar year 2012 survey were the inclusion of cell phone users who received 90% or more of all calls via cell phone (overlapping phone usage), inclusion of college students living in university housing or dormitories in the cell phone survey and the implementation of unified four digit disposition codes[+] for both landline and cell phone calling outcomes. The number of completed cell phone interviews was increased to at least 3,000, about three times the size of the cell phone sample collected in 2011 while landline interviews was reduced to about 4,000.

By the end of calendar year 2012, the overall survey response rate* was 38.0%. By phone type, the landline response rate was 43.6% consisting of 3,956 adult residents completing the survey and 159 participants partially completing the survey; meanwhile, cell phone response rate was 30.0% consisting of 3,929 adult respondents. However, 506 or nearly 13% of the cell phone respondents no longer resided in the state. These respondents were not included in the analysis presented.

There were 3,467 cell phone participants: 3,127 fully completed and 340 partial completes (9.8%). All cell phone and landline participants included in the tables presented in this document were Hawaii residents.

How was the data weighted?

Combining the landline and cell phone surveys, the overall number of respondents was 7,582. The sample was weighted to reflect the adult population of the state utilizing the sample design weight and adjusting for overlapping phone usage** to derive the composite weight and adjusting this composite weight for the population. The weighting strategy, called iterative proportional fitting or raking, sub-divided the adult population of Hawaii in twelve ways (called control marginals) to derive the final weights for the 7,582 respondents. Six of these twelve marginal were single variables including race, education, marital status, home ownership, telephone source and county. The remaining were combinations of the individual variables, including gender & age, gender & race, gender & county, race & age, county & age and county & race. The number of categories within the control marginal varied. For example, the ‘gender & age’ marginal had 14 categories representing the male and female adult populations, each grouped into seven age categories. The’ county & age’ marginal had 24 categories representing six age groups within each of Hawaii’s four counties. The twelve marginal totals were used in a repetitive adjustment process to derive final weighting factors which, when applied to the sample, statistically adjusted the sample to be representative of the Hawaii adult population. Raking is the same methodology used by the US Census American Community Survey.

What information is displayed in the tables?

All the percentages and confidence intervals in the statistical tables included are weighted to reflect the adult population of the state. In creating the indicators presented in these reports, respondents who reported that they didn’t know the answer to a question, those who refused to answer the question, or those whose responses to a particular question were not recorded for any other reason were excluded from the analysis of that particular indicator. Thus, the number of respondents for each indicator in the analysis varies slightly and is typically less than the total sample of 7,582.

Results with a confidence interval wider than twenty (upper limit minus lower limit) or questions with fewer than fifty respondents are not reported. The analytical results are presented in terms of socio-demographic characteristics including age, sex, self-reported single ethnicity group, marital status, education, employment, annual household income, as well as geographic characteristics including county and sub-county.

Example

To look up an indicator of general health, the reader is referred to the 'General health status' table.

The column 'Total N' is the number of adults sampled who responded to the question, including the number of adults in each response category. This column is provided for your information, and should not be interpreted, as this data is not weighted.

To obtain the true, weighted population parameters for this indicator, the reader is directed to the 'Estimated Number of Adults' column.

To find out the prevalence of poor health, go to the "POOR' column, from where you find that 4.2% of adults in the state reported their health is poor.

- In order to compute the estimated number of adults that report being in poor health in year 2012, multiply the POOR percent value with the 'Estimated number of Adults' column value and divide the result by 100. For 2012, this calculation (4.2*1,078,177)/100 give a result of 45,283, rounded to the nearest whole number. As a result, one may say 4.2% of adults in Hawaii are in poor health, which translates to about 45,283 adults.
- Similarly, if one wants to know how many adults aged 75 years and older are in poor health, use the values in the row '75+ years' to repeat the same calculation. Here, the calculation performed (7.8*95,721)/100 gives a result of 7,466 rounded to the nearest whole number. This number is interpreted to mean that '7,466 adults who are 75 years or older reported their health was poor in 2012, or equivalently, 7.8% of 75 years olds reported being in poor health.

+Disposition codes are used to assess the rates and reasons for non-response among those contacted who were unable or unwilling to participate in the BRFSS survey.

*Response rates for BRFSS are calculated using standards set by the American Association of Public Opinion Research (AAPOR) Response Rate Formula #4 (http://www.aapor.org/Standard_Definitions2.htm). The response rate is the number of respondents who completed the survey as a proportion of all eligible and likely-eligible persons. For detailed information see the BRFSS Summary Data Quality Report http://www.cdc.gov/brfss/annual_data/2012/pdf/SummaryDataQualityReport2012_20130712.pdf.

**For explanation of sample design weight and weighting in general see http://www.cdc.gov/brfss/annual_data/2012/pdf/Weighting%20the%20Data_webpage%20content%2020130709.pdf.

ALCOHOL USE

There are six questions asked relevant to alcohol consumption, driving and seatbelt use.

A.*/* During the past 30 days, how many days per week or per month did you have at least one drink of alcoholic beverage such as beer, wine, a malt beverage or liquor?

B.*/* One drink is equivalent to a 12-ounce beer, a 5-ounce glass of wine, or a drink with one shot of liquor. During the past 30 days, on the days when you drank, about how many drinks did you drink?

NOTE: *A 40 ounce beer would count as 3 drinks or a cocktail drink with 2 shots would count as 2 drinks.*

C.*/* Considering all types of alcoholic beverages, how many times during the past 30 days did you have X *(X = 5 for men, X = 4 for women)* or more drinks on an occasion?

D.*/* During the past 30 days, what is the largest number of drinks you had on any occasion?

E.*/* During the past 30 days, how many times have you driven when you've had perhaps too much to drink?

F./ How often do you use seat belts when you drive or ride in a car?

IMMUNIZATION

For Immunization, following questions were asked.

Seasonal flu

Now I will ask you questions about the seasonal flu vaccine.

There are two ways to get the seasonal flu vaccine, one is a shot in the arm and the other is a spray, mist, or drop in the nose called FluMist™.

A new flu shot came out in 2011 that injects vaccine into the skin with a very small needle. It is called Fluzone Intradermal vaccine. This is also considered a flu shot.

A.*/* During the past 12 months, have you had either a seasonal flu shot or a seasonal flu vaccine that was sprayed in your nose?

B.*/* During what month and year did you receive your most recent flu shot injected into your arm or flu vaccine that was sprayed in your nose?

C.*/* At what kind of place did you get your last flu shot/vaccine?

1. A doctor's office or health maintenance organization (HMO)
2. A health department
3. Another type of clinic or health center (Example: a community health center)
4. A senior, recreation, or community center
5. A store (Examples: supermarket, drug store)
6. A hospital (Example: inpatient)
7. An emergency room
8. Workplace
9. Some other kind of place
10. A school

Pneumonia

A pneumonia shot or pneumococcal vaccine is usually given only once or twice in a person's lifetime and is different from the flu shot.

Have you ever had a pneumonia shot?

During the past 12 months, have you had either a seasonal flu shot or a seasonal flu vaccine that was sprayed in your nose?

FALL AND INJURY

Information about fall and injury among adults aged 45 years old and older is derived from following questions.

By a fall, we mean when a person unintentionally comes to rest on the ground or another lower level.

A.*/* In the past 12 months, how many times have you fallen?

If the answer was one or more than one then the next question was asked.

B.*/* Did this fall cause an injury?

OR

How many of these falls caused an injury?

By an injury, we mean the fall caused you to limit your regular activities for at least one day or to go see the doctor.

Number of times you fell in the past 12 months and the related injuries

COLORECTAL CANCER SCREENING

With adults aged 50 years old or older, for colorectal cancer screening, these questions were asked.

A./ A blood stool test is a test that may use a special kit at home to determine whether the stool contains blood. Have you ever had this test using a home kit?

B./ How long has it been since you had your last blood stool test using a home kit?

1 Within the past year (anytime less than 12 months ago)
2 Within the past 2 years (1 year but less than 2 years ago)
3 Within the past 3 years (2 years but less than 3 years ago)
4 Within the past 5 years (3 years but less than 5 years ago)
5 5 or more years

C./ Sigmoidoscopy and colonoscopy are exams in which a tube is inserted in the rectum to view the colon for signs of cancer or other health problems. Have you ever had either of these exams?

D./ How long has it been since you had your last sigmoidoscopy or colonoscopy?

1 Within the past year (anytime less than 12 months ago)
2 Within the past 2 years (1 year but less than 2 years ago)
3 Within the past 3 years (2 years but less than 3 years ago)
4 Within the past 5 years (3 years but less than 5 years ago)
5 Within the past 10 years (5 years but less than 10 years ago)
6 10 or more years

E./ For a SIGMOIDOSCOPY, a flexible tube is inserted into the rectum to look for problems. A COLONOSCOPY is similar, but uses a longer tube, and you are usually given medication through a needle in your arm to make you sleepy and told to have someone else drive you home after the test. Was your MOST RECENT exam a sigmoidoscopy or a colonoscopy?

HIV

There are 3 questions about HIV in BRFSS questionnaire. The way these questions were asked is described below.

The next few questions are about the national health problem of HIV, the virus that causes AIDS. Please remember that your answers are strictly confidential and that you don't have to answer every question if you do not want to. Although we will ask you about testing, we will not ask you about the results of any test you may have had.

A.*/* Have you ever been tested for HIV? Do not count tests you may have had as part of a blood donation. Include testing fluid from your mouth.

B.*/* Not including blood donations, in what month and year was your last HIV test?

C.*/* *I'm going to read you a list. When I'm done, please tell me if any of the situations apply to you. You do not need to tell me which one.*

- *You have used intravenous drugs in the past year.*
- *You have been treated for a sexually transmitted or venereal disease in the past year.*
- *You have given or received money or drugs in exchange for sex in the past year.*
- *You had anal sex without a condom in the past year.*

Do any of these situations apply to you?

Have you ever been tested for HIV, not counting blood donation test?
