

Hale Nanea (Storet # 710)

Lat/Long: N20°53'49.7"
W156°27'37.8"
(NAD83; 5m)

Comments:

Reports of fecal material washing onto the beach have been received for this area. The material was found to be turtle feces. There is a large pond next to the shoreline. The pond receives storm water discharges from the storm drain system which serves most of the Kahului Industrial area. The system is owned by A&B. The pond is connected to the near shore waters by a natural drainway as well as three 4' culverts. The outlets for the culverts are usually closed with pieces of plywood and are opened only during periods of heavy rainfall.
