COURSE DESCRIPTION

This training program deals with process control in a trickling filter solids contact (TF/SC) process. TF/SC is an aerobic combined suspended growth/attached growth process which combines a trickling filter with an activated sludge process. The main concern is to make sure that the effluent meets the regulatory values for the biochemical oxygen demand (BOD) and suspended solids (SS) are less than 30 mg/l. To maintain these levels and, thus have an effective operation, you must: (a) maintain an adequate number of microorganisms; (b) maintain good settling properties; (c) supply adequate air to the aeration tank; and (d) remove sludge from the clarifier before septic conditions or de nitrification problems occur. Other objectives include: (a) identify the components of biotower, aeration, reaeration, and clarification methods; (b) describe the purpose, operation, and maintenance requirements of major components; (c) use checklist to start-up, shut down and troubleshoot a system; and (d) demonstrate knowledge of F/M ratio, filter loading and recirculation rates, and mean cell retention time for analyzing plant data.
