

Navy Water System Contamination Health Survey

A public health team from the Hawaii Department of Health and the Centers for Disease Control and Prevention (CDC)/Agency for Toxic Substances and Disease Registry are conducting a survey to learn more about the experience of people who have been affected by the petroleum contamination in the U.S. Navy's Joint Base Pearl Harbor-Hickam drinking water system.

People Served By The Navy Water System Can Participate

Civilians and DOD-affiliated individuals who have been in areas served by the Navy water system since November 20, 2021 can participate in the survey. People who work, but do not live, in the area may participate. Parents and guardians may also complete the survey for children who attend schools or early care facilities served by the Navy water system.

Questions Will Cover Water Use, Health Symptoms, And More

The survey asks questions about ways you used the contaminated water, any health symptoms you have experienced, and medical care you have sought. There will also be questions about the impacts on children and pets, demographics, and your medical history. Your identity will be kept confidential.

You May Be Visited By An In-Person Team

The survey team may visit various housing areas on the Navy water system. They will be wearing CDC vests and carry U.S. Department of Health and Human Services identification.

The Information Will Help Officials Better Respond To This And Future Incidents

The information the team collects will help DOH better understand the impacts of this contamination event and determine what steps are needed to protect the health of people who were exposed. It will also help DOH prepare for future incidents. Results will be summarized in a publicly available report.

How to Participate
