*Concentrations for branched and linear isomers are based on LC/MS chromatographic analysis only.

A qualitative standard (Sect. 3.19) is available for PFOA that contains the linear and branched isomers (Wellington Labs, Cat. No. T-PFOA, or equivalent). This qualitative PFOA standard must be purchased and used to identify the retention times of the branched PFOA isomers, but the linear only PFOA standard must be used for quantitation (Sect. 12.2) until a quantitative PFOA standard containing the branched and linear isomers becomes commercially available.1

1. The certified value is the concentration calculated from gravimetric and volumetric measurements unless otherwise stated.
 2. Standards are prepared gravimetrically using balances that are calibrated with weights traceable to NIST (see above).
 3. All standards are certified for 100% of the stated value, with the exception of those standards with a "spec. tabling/9" label.
 4. All standards are certified for 100% of the stated value, with the exception of those standards with a "spec. tabling/9" label.
