Baseline Methodology  
IMPROVE Site Relocation for  
Haleakala National Park**

## **HACR1 Baseline Methodology**

Baseline visibility conditions for the HACR1 monitor at Haleakala NP were reestablished pursuant to EPA's April 13, 2020 letter, Recommendation for the Use of Patched and Substituted Data and Clarification of Data Completeness for Tracking Visibility Progress for the Second Implementation Period of the Regional Haze Program. Procedures on page 26 of Hawaii's 2017 progress report were followed to reestablish a baseline with data from the WRAP TSS. IMPROVE data from the TSS was updated using criteria from EPA's April 13, 2020 letter.

Baseline data from 2000-2004 and additional data over the first 2005-2009 progress period were available for the HALE monitor. However, visibility data for the HACR1 monitor was only available in the first progress period since this monitor started in 2007. Averages for the 2000-2004 baseline were determined with visibility data from 2001-2004 for the HALE1 monitoring station since 2000 data was not representative and available for use. For HACR1, data for the 2005-2009 progress period was from 2007 through 2009 because the visibility monitor started operating in 2007. Progress period (2005-2009) to baseline (2000-2004) ratios for each haze species and haze index (HI) were determined as follows:

$$\frac{\text{HACR1 Progress Period}}{\text{HALE Progress Average}} = \text{HACR1 Baseline Period Estimate}$$

The table below shows light extinction averages and the progress period to baseline ratios from IMPROVE data collected at the HALE1 station.

The table below provides the baseline haze index estimates for the HACR1 monitor. The baseline haze index was determined by scaling each HACR1 haze species for each of the clearest and most impaired days from 2007 to 2009 by the HALE1 scaling ratio in the table above, summing the scaled  $b_{ext}$  for each species for each day, and calculating the haze index from the summed  $b_{ext}$  values, including a value of  $9 \text{ Mm}^{-1}$  for Rayleigh scattering, using the deciview equation (i.e.,  $dv = 10\ln(b_{ext}/10)$ ). Spreadsheet calculations are shown on the following pages of this appendix.
