Weekly COVID-19 Cluster Report

October 14, 2021

It has been one month since the City and County of Honolulu introduced the Safe Access Program*, which requires all employees of restaurants, bars, gyms, and other establishments to **show proof of vaccination** or submit to **weekly COVID-19 tests**. COVID-19 is **highly transmissible** and can be spread by individuals who don't have symptoms and don't know they have COVID-19 infection. Without weekly COVID-19 testing, asymptomatic, unvaccinated employees may unknowingly be carriers of the virus. As a result of this program, 19 COVID-19 positive food service workers have been identified, with 13 (68%) of these cases determined to be **asymptomatic**. Identifying these positive cases helps **prevent potential transmission** of COVID-19 in the workplace. In order to control COVID-19 in the community it is important to be **proactive through vaccination** and **routine testing**.

*[City and County of Honolulu Emergency Order No. 2021-11, August 30, 2021](#).

In September 2021, the Hawai'i State Department of Health investigated a **cluster of 4 COVID-19 cases associated with a restaurant on Oahu**. It was reported that 4 of the 31 employees tested positive for SARS-CoV-2, the virus that causes COVID-19 (attack rate: 12%). No secondary cases were identified. No cases were hospitalized. Only one of the cases was fully vaccinated. The 3 unvaccinated employees were discovered to be positive after the **required weekly testing**, all were asymptomatic at the time of testing. All 4 employees had **overlapping shifts** and 3 of them work the front of the house in the restaurant. One employee was at work while infectious, exposing the other employees. None of the cases have other sources of infection. The restaurant was closed for 26 days.

In September 2021, the Hawai'i State Department of Health investigated a **cluster of 16 COVID-19 cases associated with an entertainment venue on Oahu**. Out of the 120 employees at the venue, 13 employees tested positive for SARS-CoV-2 (attack rate: 11%); of these, 5 were fully vaccinated. Three secondary cases among household members were also identified; of these, 2 were fully vaccinated. No cases were hospitalized. Three employees car-pooled to a drive thru testing site together where they all **tested positive**. Two of these employees, who were unvaccinated and asymptomatic, were going for their required weekly testing, and the other, who is fully vaccinated, went to get tested due to symptoms. The 3 confirmed cases prompted an **investigation on the establishment** and 10 other cases were discovered among employees at the event. The employer stated that 71% of employee are fully vaccinated; however, **multiple risk factors** during and outside the event contributed to transmission among employees. **Social distancing** was **not enforced**, and **masks** were **not worn** by performers in the dressing room or during performances. Employees also reported socializing outside of work without the use of masks or social distancing, and **sharing vapes** and **cigarettes** during work breaks. The establishment was **closed for 5 days**.

With COVID-19 widespread in our community, it can be difficult to pinpoint the **source of exposure**, but investigations by DOH can provide clarity by finding associations between cases. Most importantly, the first steps to prevent the spread of COVID-19 are **implementing personal** and **community mitigation measures**. Employers should ensure **safe work environments** for employees by encouraging vaccination, weekly testing, proper mask use, and increased ventilation, as well as incorporating safe break protocols for employees, preventing congregating in common locations, and requiring social distancing (< 6ft). Vaccination is the best way to prevent severe illness, hospitalization, and death. Employees who are **fully vaccinated** are exempt from the quarantine requirement after a known COVID-19 exposure if they are asymptomatic and are not subjected to weekly testing. Vaccinations keep us safe and **prevent negative financial consequences** that come with business closures and time missed at work. Vaccination and weekly testing for those who are unvaccinated help **protect our community** and keep **workplaces safe** for employees. [#HIGotVaccinated](#)

Introduction to the State of Hawai'i Weekly COVID-19 Cluster Report

A disease cluster refers to multiple cases of a disease occurring at one time, in one geographic location, or among people with the same or similar shared exposures. Public health officials investigate and study disease clusters because they can provide important information about how diseases are transmitted between individuals and among groups of people; information which can then be used to identify risk factors, inform official recommendations, design interventions, and implement policies to prevent, mitigate, and stop the spread of that disease in communities.

In Hawai'i, COVID-19 clusters associated with community events, social gatherings, workplaces, and other settings have helped public health officials understand the specific settings where disease transmission is most likely to occur. As our state looks to modify current restrictions on businesses and activities implemented in response to the global COVID-19 pandemic, the Hawai'i State Department of Health is prioritizing not only investigating and analyzing local COVID-19 clusters, but also sharing current cluster information and disseminating key lessons learned to date.

It is important to note that most COVID-19 cases cannot be linked to a specific setting or cluster. Therefore, the total number of cases identified as associated with COVID-19 clusters in Hawai'i will be significantly lower than the overall total number of cases of COVID-19 identified within the State of Hawai'i. The tables below summarize COVID-19 clusters that have been identified through statewide case investigation and contact tracing efforts and are actively under investigation within the State of Hawai'i during the specified reporting week. The same cluster may be included in multiple reports from week to week if a new case has been identified within 14 days of the date the report was finalized.

Definitions for Terms Used in this Report

Because this weekly report focuses on clusters associated with non-household exposures, the definition of a **COVID-19 cluster** employed within this report is as follows:

Three (3) or more confirmed or probable cases of SARS-CoV-2 (the virus that causes COVID-19) linked to a particular site or event within one incubation period (14 days) *as long as those cases do not have outside exposure to each other* (i.e. they are not household members or close contacts outside the selected location).

****** This definition has been updated from two (2) or more confirmed or probable cases of SARS-CoV-2 to **three (3)** or more confirmed or probable cases of SARS-CoV-2 effective January 1, 2021. This change was made to reduce “noise” related to sporadic cases that may occur in the same setting, especially when community case rates are high, and is reflected in the county-specific tables beginning with the January 21, 2021 report. ******

Note: Identifying cases as part of a cluster does not necessarily imply that transmission has occurred in the site or at the event associated with the cluster.

Additional definitions for terms used within this report are outlined below.

Case	Both confirmed and probable cases of SARS-CoV-2 (the virus that causes COVID-19), including deaths.
Confirmed case	A case with confirmatory laboratory evidence.
Probable case	Refers to a case: <ul style="list-style-type: none"> • Meeting clinical criteria AND epidemiologic linkage with no confirmatory laboratory testing performed for SARS-CoV-2 <p style="text-align: center;">OR</p> <ul style="list-style-type: none"> • Meeting presumptive laboratory evidence <p style="text-align: center;">OR</p> <ul style="list-style-type: none"> • Meeting vital records criteria with no confirmatory laboratory evidence for SARS-CoV-2.
Cases associated with the primary setting	Refers to cases linked to a COVID-19 cluster that were directly exposed to the primary site or event.
Linked cases outside the primary setting	Refers to cases linked to a COVID-19 cluster that were NOT directly exposed to the primary site or event (for example, cases among household contacts of any cases associated with the primary setting).

Exposure Setting Categories

Exposure Setting Category ^a	Specific Settings Included in Category ^b
<i>Congregate Settings</i>	
Correctional Facilities	Jails, prisons, detention centers, correctional treatment centers / “sober living” centers, transitional correctional facilities or homes / “halfway houses” for adults and adolescents
Educational Settings	Preschools, K-12, and institutes of higher education, school-based athletics, after school programs
Shelters	Facilities providing short or long-term sheltering and other social services for individuals and families and groups without access to permanent housing due to homelessness, disaster, emergency, violence, or other circumstances
<i>Food Service, Production, and Distribution</i>	
Bars & Nightclubs	Establishments that are principally engaged in the business of selling alcoholic beverages for onsite consumption
Food Suppliers	Grocery stores, other food distributors, manufacturers, warehouses, processors, farms, food pantries
Restaurants	Food service establishments offering either dine-in or take-out services, cafeterias, banquet facilities / private event facilities / private reception venues where food is served
<i>Occupational Settings</i>	
Construction & Industrial	Construction and industrial settings, including residential and non-residential construction sites, landscaping companies, shipyards, non-food manufacturers, industrial warehouses, and related sales and distribution centers
Other Occupational Settings	Offices, retail establishments, first responders
Travel, Lodging & Tourism	Domestic / international / interisland travel, lodging, cruise ships, other tourism
<i>Social and Recreational Activities</i>	
Social Gatherings	Parties, group gatherings, weddings, funerals, other social functions
Places of Worship	Religious services and other events / activities at places of worship
<p>^a COVID-19 clusters in long term care and other healthcare settings are summarized in the State of Hawai'i Weekly COVID-19 Clusters in Healthcare Settings Report. Additionally, a long-term care table is included in the Disease Outbreak Control Division COVID-19 Operations Report weekly on Wednesdays.</p>	
<p>^b Specific settings included in the reference table may not be exhaustive for the category.</p>
