

PROTECT

Hawai'i from Mosquito-borne Diseases

Mosquitoes spread viruses that can cause serious health issues

IF you are traveling or recently traveled to an area where **Zika**, **dengue**, or **chikungunya** is spreading, keep Hawai'i free from these diseases by preventing mosquito bites:

- Use insect repellents while you travel and after returning home.
- Wear long sleeves, long pants, and socks, especially when outdoors.
- Avoid areas with mosquitoes, such as shady, damp locations or standing water.

IF you become ill within two weeks of traveling to Southeast Asia, Latin America, or the South Pacific, see a doctor immediately and notify him/her of your travel history.

IF you are pregnant and considering travel to an area where there are diseases spread by mosquitoes, consult your physician before making plans. If you decide to travel, especially in areas where Zika is present, protect yourself from mosquito bites.

At home, Fight the Bite by eliminating mosquito breeding areas.

Get rid of standing water

Fix leaky faucets and hoses

Repair screens and windows

Dispose of old tires and debris

If you have questions about Zika, dengue, or chikungunya, call the Aloha United Way's Hawaii 211 (dial 2-1-1)
