Recommended Immunization Schedules for Persons Aged 0 Through 18 Years

Source:

This child should receive one dose of any Hib vaccine now as his final dose, since his current age is 12 through 59 months, his first dose was administered before his first birthday, his second dose was administered at younger than 15 months of age, and it has been 8 weeks since his previous dose.

(c) One dose of any Hib vaccine now

Answer:
