**WHY** do preteens & teens need to be vaccinated?

Vaccines are not just for infants. As children get older, the protection provided by childhood vaccines can wear off. Preteens and teens are also at risk for different diseases as they get older.

**WHEN** should preteens & teens be vaccinated?

Healthcare providers recommend several vaccines for preteens at their 11 or 12 year old check-up. These vaccines prevent serious, sometimes life-threatening diseases. Older teens who weren’t vaccinated earlier should be immunized as soon as possible.

**WHAT** vaccines do preteens & teens need?

<table>
<thead>
<tr>
<th>DISEASE</th>
<th>VACCINE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pertussis (Whooping Cough)</td>
<td>The Tdap vaccine protects against three serious diseases: tetanus, diphtheria, and pertussis. All preteens should receive one Tdap shot at age 11 or 12 years.</td>
</tr>
<tr>
<td>Meningococcal Infection</td>
<td>The meningococcal vaccines protect against some types of bacteria that cause meningococcal disease. All preteens should receive the quadrivalent conjugate meningococcal vaccine when they are 11 or 12 years old and need a booster shot at age 16 years. Teens (preferably at age 16 - 18 years) may also be vaccinated with a serogroup B meningococcal vaccine.</td>
</tr>
<tr>
<td>Human Papillomavirus (HPV)</td>
<td>All preteens should receive HPV vaccine when they are 11 or 12 years old. Two shots, given at least 6 months apart, are needed for children who receive the first dose before their 15th birthday. Three doses are needed for adolescents who start the series later.</td>
</tr>
<tr>
<td>Influenza</td>
<td>All preteens and teens should be vaccinated against flu each year, ideally by the end of October. Vaccination during the flu season, even in January or later, is recommended for those who weren’t vaccinated earlier.</td>
</tr>
</tbody>
</table>

**Are these Vaccines Safe & Effective?**

All of these vaccines have been studied extensively and are safe and effective. Preteens and teens may experience mild side effects such as redness and soreness at the injection site. Some preteens and teens may faint after getting vaccinated. To help avoid fainting, preteens and teens should sit or lie down when they get a shot and for about 15 minutes after.

**Can I Get Help Paying for Vaccines?**

Ask your child’s healthcare provider about the Vaccines for Children (VFC) program. The VFC program offers vaccines at no cost for children ages 18 years and younger, who are uninsured, underinsured (health insurance does not pay for childhood immunizations), Medicaid-eligible, or American Indian or Alaska Native.

**HOW** can parents help?

Help your preteen or teen stay healthy by keeping up-to-date on recommended immunizations. Make an appointment with your child’s healthcare provider today.
