

If your business handles hazardous chemicals, hazardous substances, or extremely hazardous substances, you may be required to submit an annual Hawai'i Emergency Planning and Community-Right-To-Know Act (HEPCRA) Tier II Chemical Inventory report to the Hawai'i Department of Health (DOH).

### Why is this information important?

Information received will be used by the DOH Hazard Evaluation and Emergency Response (HEER) Office, the Local Emergency Planning Committee (LEPC), and local emergency agencies such as the fire department for emergency planning and response to accidents or releases of hazardous chemicals or substances.

Federal agencies such as the U.S. Department of Homeland Security may also request information from DOH. This information will be helpful in preventing major property damage or loss of life in any type of disaster.

# WHAT NEEDS TO BE REPORTED?

There are many different types of hazardous substances that need to be reported if they are present at your business in regulated amounts. Hazardous chemicals are defined by the Occupational Safety and Health Administration and include gasoline, diesel, and any product that requires a Material Safety Data Sheet.

The reporting threshold for hazardous chemicals is 10,000 pounds. If the chemical is considered a hazardous substance or Extremely Hazardous Substance (EHS), the reporting threshold is 500 pounds or less.

For example:

- Gasoline, diesel, or other types of fuel not associated with retail gas stations are reportable at equal or greater than 10,000 pounds, or 1,500 gallons.
- Propane is reportable at 2,400 gallons or greater.
- EHS such as chlorine, anhydrous ammonia, sulfuric acid, and others are reportable at 500 pounds or their threshold planning quantities (TPQs).

View a full list of reportable substances at [www.epa.gov/epcra/consolidated-list-lists](http://www.epa.gov/epcra/consolidated-list-lists).
