### **Department of Health cites Island Recycling, Inc. for water pollution violations at Kapolei and Dillingham facilities**

HONOLULU – The Hawaii State Department of Health (DOH) has issued a Notice of Violation and Order against Island Recycling, Inc. at both its Kapolei and Dillingham facilities located at 91-140 Kaomi Loop in Kapolei and 1803 Dillingham Blvd. in Honolulu, respectively. The company has been cited for failing to comply with Hawaii's National Pollutant Discharge Elimination System (NPDES) permit for industrial storm water discharges. DOH has ordered Island Recycling to pay a penalty of \$25,400, clean the affected drainage ditch on its property in Kapolei, and take corrective actions at both its Kapolei and Dillingham facilities to prevent the facilities' from discharging polluted storm water to nearby storm drains and state waters. The company may contest the order and request a hearing within 20 days.

Island Recycling has NPDES permit coverage for both its Kapolei and Dillingham facilities under Hawaii's General Permit authorizing discharges of industrial storm water. However, during inspections performed in June 2014 and subsequent file reviews, DOH found the facilities were not implementing controls to properly prevent polluted storm water discharges. The company had also placed discarded materials and equipment in a drainage ditch that is recognized as a state water body and protected by state and federal regulations. In addition to inadequate storm water controls at the facilities, Island Recycling also failed to submit Discharge Monitoring Reports required by the NPDES General Permit that are vital to determining the safety and quality of the facilities' storm water discharges.

The Clean Water Act prohibits discharging pollutants through a point source into state waters unless it is allowed by an NPDES permit. The permit contains limits on what can be safely discharged, monitoring and reporting requirements, and other provisions to ensure that the

discharge does not hurt water quality or people's health. The permit translates general requirements of the Clean Water Act into specific provisions tailored to the operations of facilities discharging pollutants. For information on the National Pollutant Discharge Elimination System go to [www.epa.gov/npdes/npdes-permit-basics](http://www.epa.gov/npdes/npdes-permit-basics).

The DOH Clean Water Branch regulates, permits, and inspects a variety of industrial facilities ranging from construction sites to landfills and recycling facilities to ensure that these facilities do not pollute Hawaii's waters especially during rainfall and storm conditions. The Clean Water Branch protects and promotes the health of Hawaii's residents, visitors, and environment through regulation of high-risk water pollution sources, and education of industrial sectors and the general public. More information about the DOH Clean Water Branch and access to water quality data and files for NPDES permitted facilities is available at <http://health.hawaii.gov/cwb/>.
