HAWAII DEPARTMENT OF HEALTH UPDATE ON MUMPS: EIGHT ADDITIONAL CASES CONFIRMED

HONOLULU – The Hawaii State Department of Health (DOH) has confirmed eight (8) additional cases this week of Oahu residents with the mumps, pushing the total number of cases this year to 104.

Three new cases were confirmed on Tuesday, June 13, and involved two (2) adults and one (1) child. None of the cases required hospitalization and all three are recovering. An additional five (5) cases were confirmed today, involving one (1) adult and four (4) children, none of whom required hospitalization.

DOH expects the current mumps outbreak to continue and the investigation of new cases is ongoing. Mumps is highly contagious and is spread through coughing, sneezing and sharing cups and utensils. Symptoms include swollen or tender salivary glands, low fever, tiredness and muscle aches. People who think they have mumps should contact their health care provider and remain at home.

The MMR vaccine provides the best protection against the disease. Two doses of the vaccine are 88 percent effective at protecting against mumps and one dose is 78 percent effective. Being fully vaccinated can help protect loved ones, family members, friends, classmates and coworkers.

The MMR vaccine is available at local pharmacies across the state. To locate a vaccinating pharmacy nearest you, visit http://health.hawaii.gov/docd/vaccinesimmunizations/vaccine-locators/ or call the Aloha United Way information and referral line at 2-1-1.

Additional information about mumps and the ongoing investigation can be found on the DOH website at http://health.hawaii.gov/docd/department-of-health-investigating-mumps-cases/.
