DOH reports two additional monkeypox cases in Hawai'i

HONOLULU – The Hawai'i Department of Health (DOH) is reporting two additional cases of monkeypox.

“While the risk to most Hawai'i residents remains low, local transmission of monkeypox is occurring,” said Deputy State Epidemiologist Dr. Nathan Tan. “The growing number of cases in Hawai'i underscores the importance of vaccination—if you are eligible, please take this step to protect yourself and our community.”

Cases in Hawaii

DOH has identified two additional cases of monkeypox:

- An O'ahu resident whose case is not related to travel. Links to prior cases are under investigation.
- A non-resident diagnosed on O'ahu whose case is related to travel outside of Hawai'i.

This brings the total number of cases reported in Hawai'i since June 3 to 18. DOH continues to conduct contact tracing and follow-up with all reported cases.

Vaccination

The JYNNEOS vaccine is available statewide to Hawai'i residents 18 and older. Vaccination eligibility includes:

- Close contact in the last 14 days with a person with known or suspected monkeypox infection;
- Gay, bisexual, and other men who have sex with men and transgender individuals who have multiple or anonymous sex partners;
- Persons with severe immune compromise (e.g., advanced or poorly controlled HIV infection, active cancer treatment, high-dose steroids) or certain skin conditions, such as eczema; AND who have a household member or sex partner at high risk for monkeypox.

DOH and healthcare providers in each county who directly reach individuals at higher risk of monkeypox exposure continue to vaccinate eligible individuals. Individuals eligible for vaccination can make an appointment by contacting:

Provider/Organization	Area Served
Hawai'i Department of Health Phone: (808) 586-4462 Online: health.hawaii.gov/docd/mpxvax <i>Kaua'i residents can also call (808) 241-3495</i>	Statewide
Malama I Ke Ola Phone: (808) 871-7772	Maui
Waianae Coast Comprehensive Health Center Phone: (808) 427-0442	O'ahu (sites in Waianae and Kapolei)
Hawai'i Health & Harm Reduction Center Phone: (808) 521-2437	O'ahu (site in Honolulu)

Appointments are still available on O'ahu on Saturday, August 20 and Sunday, August 21 from 9:00 AM – 1:00 PM at the Blaisdell Center. Vaccination will be by appointment only—appointments can be scheduled online at health.hawaii.gov/docd/mpxvax or by phone at (808) 586-4462.

DOH has received approximately 2,800 doses of JYNNEOS and continues to order Hawai'i's full allocation from the federal government. More than 1,000 doses have been administered.

JYNNEOS is a two-dose series administered approximately four weeks apart. The vaccine may be administered between layers of the skin, similar to a TB skin test, or under the skin. Both routes of administration provide the same, high level of protection.

Transmission

Monkeypox is mainly spread through close, intimate contact with body fluids, lesion material, or items used by someone with monkeypox. Monkeypox may be spread through large respiratory droplets. These droplets generally cannot travel more than a few feet, so prolonged contact is required.

Nationwide, the current cases are primarily spreading among social networks of gay, bisexual, and other men who have sex with men. In Hawai'i, at least some of the cases have been reported among gay or bisexual men. However, anyone who has close contact with someone with monkeypox is at risk of infection, regardless of sexual orientation or gender identity.

Testing & Treatment

Individuals with monkeypox symptoms, including flu-like symptoms, swollen lymph nodes, or new or unexplained rash or sores, should immediately contact their healthcare provider. Testing and treatment are available through healthcare providers.
