

INORGANIC ANIONS - NITRATE SAMPLING

This sample uses a 250 ml plastic bottle. The bottle may look like one of the bottles shown at the right. No preservative is added to the sample.

Fill out the sample label and apply it to the sample bottle. Remove any connections (hoses, etc..) from the sample tap. Flush the tap for at least 2-3 minutes and then rinse out the plastic bottle and the cap 3 times with the water you are sampling.

Fill the plastic bottle to the rim with your water sample.

Place the cap on the bottle.
