

CERTIFIED OR APPROVED DRINKING WATER LABORATORIES

If you are planning to have your drinking water tested, please follow these guidelines:

1. Always confirm the laboratory's current certification status with them *before* submitting any water samples.
2. Since few laboratories are certified to perform all required tests, ensure that the chosen lab only subcontracts samples to other laboratories that are also certified by the Hawaii Department of Health.
3. For any questions regarding laboratory certification status or specific drinking water tests, please contact the Safe Drinking Water Branch directly at (808) 586-4258.
