Project: 60481245 CIV0053 Red Hill Fuel Storage. HI

Sample Receipt Information:

Four water samples were received December 13, 2016, at 0.0°C, 0.0°C, 0.5°C, 2.0°C, and 2.0°C. The sample group was assigned Analytical Request Form (ARF) number 81734. The sample numbers and requested analyses were compared to the chains of custody and email communications. A PT sample was added to the log in; the sample was received on November 18, 2016 and logged in as sample ERH155, as instructed. No other exception was encountered.

The samples and blanks were screened for J-value responses between the detection limit (DL) and limit of quantitation (LOQ).

APPL's Laboratory control limits generated in house statistically do not meet the control limits listed in DoD QSM 5.0 for all analytes. Laboratory control spike recoveries for this project meet all control limits listed in the DoD QSM 5.0 except where noted. A copy of our in house generated control limits is available upon request. In addition, a copy of our LOQ control limits, established using 7 data points, are also available upon request.

Only the portion of the injection log relative to these samples is included. A full sequence log is available upon request.

Measurement uncertainty can be reported upon request.

EPA Method 8260B
Gasoline

Sample Preparation:

The water samples were purged according to EPA method 5030B. All holding times were met.

Sample Analysis Information:

The samples were analyzed according to EPA method 8260B using an Agilent Gas Chromatograph with a mass spectrometer detector.

Quality Control/Assurance:

Calibrations:

Initial and continuing calibrations were performed according to the method and the DoD QSM v5.0. A second source standard was injected to verify the initial calibration. All calibration acceptance criteria were met.

Blanks:

No analyte was detected above one-half the limit of quantitation (LOQ) in the method blanks.

Spikes:

Laboratory Control Spikes (LCS) were used for quality assurance. All LCS recovery acceptance criteria were met.

Sample ERH135 was designated by the client for MS/MSD analysis. All spike recoveries were within the acceptance limits.

Surrogates:

Surrogate recoveries are summarized on the Form 2 & 8. All surrogate recoveries were acceptable.

Tuning:

The instrument was tuned using BFB. All method criteria were met.

Internal Standards:

The internal standard area counts were compared to the mid-point of the initial calibration according to method 8260. All method acceptance criteria were met.

Summary:

No problem was encountered. The data generated are acceptable.

Methane
RSK-175

Sample Preparation and Analysis

The water samples were analyzed with guidance from RSK-175. The samples were allowed to equilibrate for 10 minutes at 40°C and a portion of the headspace was analyzed using a Hewlett Packard Gas Chromatograph with a flame ionization detector. All holding times were met.

Quality Control/Assurance

Spike Recovery

A Laboratory Control Spike (LCS) was used for quality assurance. All acceptance criteria were met.

Sample ERH135 was designated by the client for MS/MSD analysis. Methane recovered outside of the 72-125% acceptance limits in the MS and MSD.

Method blanks

The blank contained no target analyte above one-half the limit of quantitation (LOQ).

Calibration

Initial and continuing calibrations were performed according to the method and the DoD QSM v5.0. A second source standard was injected to verify the initial calibration. All calibration acceptance criteria were met.

Summary:

No other analytical exception is noted.

EPA Method 300.0 and SM 2320B, and SM 3500 FeB Inorganic Analyses

Sample Preparation Information:

The water samples were prepared according to the methods.

Analysis Information:

Samples:

The samples were analyzed according to the methods. A Dionex DX500 ion chromatograph was used for the EPA 300.0 analysis. The samples were analyzed as soon as possible for ferrous iron.

The samples were analyzed for nitrate seven days after collection. The client was notified and requested the samples to be preserved and analyzed by EPA method 353.2 for total Nitrate-Nitrite as Nitrogen. Both sets of data are included with the report. All other holding times were met.

The conversion between "Nitrate" and "Nitrate as Nitrogen" is as follows:

Conversion between nitrate (NO_3) and nitrate-nitrogen (NO_3-N):

To convert	To	Multiply by
Nitrate (NO_3)	Nitrate-nitrogen (NO_3-N)	0.22
Nitrate-nitrogen (NO_3-N)	Nitrate (NO_3)	4.43

The laboratory results agree between the EPA 300.0 Nitrate and the EPA 353.2 Nitrate as Nitrogen, using the conversion factors listed above.

For sample ERH141 the 300.0 Nitrate result of 2.2mg/L is equivalent to 0.484mg/L Nitrate-Nitrite-N. The sample was preserved and analyzed as Nitrate-Nitrite-N by 353.2 with a result of 0.33mg/L.

For sample ERH135 the 300.0 Nitrate result of 2.5mg/L is equivalent to 0.550mg/L Nitrate-Nitrite-N. The sample was preserved and analyzed as Nitrate-Nitrite-N by 353.2 with a result of 0.40mg/L.

Calibrations:

Initial and continuing calibrations were performed according to the methods and the DoD QSM v5.0. A second source standard was injected to verify the initial calibration. All calibration acceptance criteria were met.

Blanks:

Bicarbonate and alkalinity were detected above one-half the LOQ in the method blank. The samples contained over ten times the concentration of the concentration detected in the method blank. No other target analyte was detected above one-half the LOQ in the method blanks.

Spikes:

Laboratory Control Spikes (LCS) and matrix spikes (MS/MSD) were used for quality assurance. All recoveries were within acceptance limits in the LCS.

Sample ERH135 was designated by the client for MS/MSD analysis. Chloride recovered above the 110% upper control limit in the MS and MSD. TOXN recovered below the 90% lower control limit in the MSD. All other spike recoveries met acceptance criteria in the MS/MSD.

Summary:

No other analytical exception is noted. All data are acceptable.

The samples and blanks were screened for J-value responses between the detection limit (DL) and limit of quantitation (LOQ).

APPL's Laboratory control limits generated in house statistically do not meet the control limits listed in DoD QSM 5.0 for all analytes. Laboratory control spike recoveries for this project meet all control limits listed in the DoD QSM 5.0 except where noted. A copy of our in house generated control limits is available upon request. In addition, a copy of our LOQ control limits, established using 7 data points, are also available upon request.

Only the portion of the injection log relative to these samples is included. A full sequence log is available upon request.

Measurement uncertainty can be reported upon request.
