Mr. Richard Takaba  
Hawaii State Department of Health  
Environmental Management Division  
Solid and Hazardous Waste Branch  
Underground Storage Tank Section  
2827 Waimano Home Road  
Pearl City, HI 96782

Dear Mr. Takaba:

**SUBJECT: RED HILL TANK COMPLEX  
SOIL VAPOR SAMPLING RESULTS FOR APRIL 2018  
DOH FACILITY ID NO. 9-102271  
DOH RELEASE ID NO. 990051, 010011, 020028, AND 140010**

Soil vapor samples were collected from beneath all active and accessible Red Hill tanks on April 25, 2018.

Soil vapor VOC concentrations were measured in the field using a photo-ionization detector. The soil vapor sampling results are being submitted as Enclosure 1.

A conservative approach is to assess the integrity of the associated tank system if VOC concentrations exceed 280,000 ppbv in soil vapor monitoring points (SVMPs) beneath tanks containing JP-5 or JP-8, or 14,000 ppbv in SVMPs beneath tanks containing marine diesel fuel. These values are 50 percent of the calculated vapor concentration from fuel-saturated water.

At Tank 5, the concentrations of VOCs detected in the front, middle, and outer edge soil vapor monitoring probes were 6,616 ppbv, 1,439 ppbv, and 6,069 ppbv, respectively. Tank 5 was emptied in January 2014 and has not contained fuel since that time. VOC concentrations in all down-gradient soil vapor monitors were below 460 ppbv.

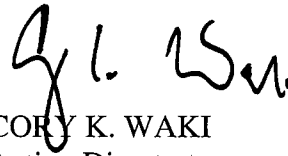

All other VOC concentrations measured in April were about 2 to 1,000 times below the action levels, with no consistent trends observed. NAVSUP FLC Pearl Harbor Causative Research Report is submitted as Enclosure 2. Possible reasons for the results are speculative and may include, but not be limited to, ongoing projects in the tunnel, groundwater level fluctuations, rainfall (or lack thereof), bi-product of biodegradation, and fuel movement in the tanks and piping.

5090  
Ser N45/0509  
May 16, 2018

Soil vapor VOC concentration trends will continue to be monitored. The next soil vapor sampling event is scheduled for May 2018, and will include collecting samples from soil vapor monitoring probes beneath all active and accessible tanks.

If there are any questions regarding this matter, or if more information is needed, please contact Mr. Melvin Muraoka at (808) 471-3869.

Sincerely,

CORY K. WAKI  
Acting Director  
Regional Environmental Department  
By direction of the  
Commander

14 May 2018

From: Deputy Director, Fuel Department, NAVSUP FLC Pearl Harbor, HI  
To: Environmental Department, NAVFAC Pearl Harbor, HI

Subj: NAVSUP FLC PEARL HARBOR CAUSATIVE RESEARCH REPORT IRT RED HILL  
SOIL VAPOR MONITORING REPORT FOR APR 2018

Ref: (a) Red Hill Bulk Fuel Storage Facility Groundwater Protection Plan  
(b) Red Hill Soil Vapor Monitoring Report for Round 120, dtd 01 May 2018

1. Ref (a) requires NAVSUP FLCPH investigate possible fuel leaks. Refs (b) reported the following soil vapor monitoring results at the Red Hill Fuel Storage Facility:

- a. A strong increase in trends at tank 7
- b. Moderate increase in trend at tank 18
- c. A slight increase in slope trends at tanks 2 -4, 6, 7,12,16,17, and 18

2. FLCPH causative research and findings:

- a. Reviewed all AFHE Unscheduled Fuel Movement (UFM) Alarm Summaries and UFM Reports. There were 4 UFM alarms recorded for the month of Apr 2018; alarms were caused by AFHE error:

04 APR 18 – tank 15 - AFHE Error  
17 APR 18 – tank 15 - AFHE Error  
20 APR 18 - tank 15 - AFHE Error  
24 APR 18 – tank 02 - AFHE Error

- b. Reviewed Red Hill Inventory Trend Analysis Reports for April 2018; reports did not reveal evidence of a loss of fuel in any Red Hill tank.
- c. Inspection of the area surrounding all Red Hill tanks did not show evidence of a fuel leak or evidence that fuel was spilled in the area.
- d. All active tanks have passed tank tightness testing within the required periodicity.
- e. Tank 07 was placed on enhanced trend analysis due to strong increase in trends at the tank. A manual gauge was taken and compared against the electronic gauge once per shift for 5 days. All gauge readings were within the required tolerance of 3/16”.

4. There's no evidence of a leaking tank in the Red Hill Complex or evidence of a spill that may have contributed to elevated soil vapor VOC levels in the area of elevated VOC concentrations.
