Mr. Richard Takaba
Hawaii State Department of Health
Environmental Management Division
Solid and Hazardous Waste Branch
Underground Storage Tank Section
2827 Waimano Home Road #100
Pearl City, HI 96782

Dear Mr. Takaba:

SUBJECT: RED HILL TANK COMPLEX
SOIL VAPOR SAMPLING RESULTS FOR OCTOBER 2020
DOH FACILITY ID NO. 9-102271
DOH RELEASE ID NO. 990051, 010011, 020028, AND 140010

Soil vapor samples were collected from beneath all active and accessible Red Hill tanks on October 15, 2020. Tanks 1 and 19 are inactive and not included in the sampling network. Tank 17 is temporarily closed for clean, inspect, and repair (CIR) and was not accessible for sampling.

Soil vapor VOC concentrations were measured in the field using a photo-ionization detector. The soil vapor sampling results are presented graphically in the Enclosure.

A conservative approach to assess the integrity of the associated tank system is to establish action thresholds for VOC concentrations in soil vapor monitoring points (SVMPs) beneath tanks as 50 percent of the calculated vapor concentration from fuel-saturated water. These action thresholds for SVMPs beneath tanks containing F-24 or JP-5 is 280,000 ppbv and 14,000 ppbv in SVMPs beneath tanks containing marine diesel fuel.

At Tank 5 (containing F-24), the concentrations of VOCs detected in the front, middle and outer edge soil vapor monitoring probes were 0, 625, and 485 ppbv, respectively. VOC concentrations in all down-gradient tank soil vapor monitors were below 18 ppbv.

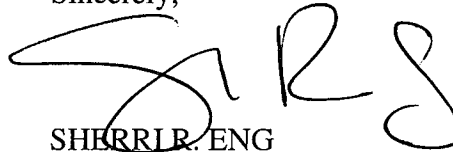

All other VOC concentrations measured in October were from 160 to 31,000 times below action levels, with no consistent trends observed.

Soil vapor VOC concentration trends will continue to be monitored on a monthly basis. The next soil vapor sampling event is scheduled for November 2020, and will include collecting samples from soil vapor monitoring probes beneath all active and accessible tanks.
